

<https://www.edie.net/news/6/EU-s-green-hydrogen-plans-hailed-as--true-game-changer--by-industry/>

Tuesday 31st August

Climate change talks this year aimed at keeping global warming in check need to consign coal power to history, the British president of the upcoming United Nations' conference said on Wednesday... "I've been very clear that I want COP26 to be the COP where we consign coal power to history," Alok Sharma, UK president for COP26, told journalists in an interview with Reuters and other partners of the global media consortium Covering Climate Now... One of the biggest challenges facing the UK COP26 Presidency will be to persuade countries to commit to more ambitious emissions-cut targets and to increase financing for countries most vulnerable to climate change.

Prayer guide for the care of creation

August 2021

“The needs of nations most acutely threatened by climate change lie at the heart of the Paris Agreement and indeed of the UN climate convention: morally and practically, there can be no successful outcome at COP26 that does not deliver for the most vulnerable across the full range of issues.”

Statement from the Least Developed Countries group, ahead of COP26.

The earth is the Lord's and the fullness thereof, the world and those who dwell therein,
Psalm 24 v 1

Sunday 1st August

Join with many other Christians from around the world with the monthly Pray and Fast for the Climate Movement on the first of each month. Prayer points for August are on their website.

Merciful God, we believe that you uphold and sustain all that you have made, while also lovingly giving us the freedom to live in relationship with the rest of creation. We ask your forgiveness for the ways we have abused that freedom, through what we have done and what we have left undone. We bring our lament and our longing for a renewed earth to you now: (prayer from Christian Climate Action's prayer for climate grief)

<https://prayandfastfortheclimate.org.uk/resources/>

Monday 2nd August

The day-by-day agenda for COP26 in November has been released. From 1st to 12th November the main summit will focus on different topics each day. But there will be many hours of negotiations before each

of those dates. Pray for all those involved, for the best outcome each day and for governments to stick to what they will promise.

<https://ukcop26.org/the-conference/presidency-programme/>

Tuesday 3rd August

The World Bank Group's new Climate Change Action Plan will attempt to deliver 'record levels' of climate finance to countries most in need of support to reduce emissions and improve resilience against the climate crisis. Between 2021 and 2025, the World Bank Group will ensure that 35% of its financial flows are in alignment with the objectives of the Paris Agreement. Specifically, the Group will support efforts from developing countries in implementing and updating Nationally Determined Contributions (NDCs) to the global climate accord. Priority areas for spending include energy, agriculture, food, water and land, cities, transport and manufacturing – with a focus on resiliency, adaptation and decarbonisation ... The World Bank is the largest multilateral provider of climate

paper commissioned by the International Labour Organisation (ILO), warns that the problem of rising sea levels is receiving little attention from those leading sustainability efforts in the sector. <https://news.trust.org/item/20210716143641-o6s3n/>

Sunday 29th August

We pray that during this year we may work and pray to change this world and humanity's response to our circumstances, to accept responsibility for the gift of this planet as our home.

May we steward it effectively, so we no longer pollute it with our waste, destruct it with our insatiable appetites for more, kill it with our poisons, but nurture it for its habitats and care for it for its plants and animals.

May we tend it for its variety, its generosity, its sheer joy as your creation, and may we teach our children and grandchildren how precious is every life you are constantly creating.

Help us to 'Show the Love', your love for all the people of the world

and for the generations to come, in Jesus' name we pray.

Amen

Monday 30th August

The European Commission boosted regulatory support for green hydrogen in its proposed overhaul of climate legislation published last week, with the renewable hydrogen coalition calling it "a true game changer" for the nascent EU industry...As part of the plans, the European Commission proposed a 50% target for "renewable fuels of non-biological origins" – essentially green hydrogen – in the share of hydrogen fuels used in European industry by 2030, whether as a feedstock or in final energy consumption. That is "a true game-changer," according to the Renewable Hydrogen Coalition, an industry group bringing together electricity companies such as Enel, Iberdrola and Orsted as well as wind industry giants like Vestas and Siemens Gamesa.

advocates who are seeking land for pollinator habitat restoration. *“The understudy of solar panels is typically managed to limit the growth of plants,”* said Maggie Graham, a faculty research assistant at Oregon State and lead author of the paper. *“My thought coming into this research was can we flip that? Why not plant under solar arrays with something beneficial to the surrounding ecosystem, like flowers that attract pollinators? Would insects even use it? This study demonstrates that the answer is yes.”*

Friday 27th August

WRAP's Courtauld Commitment, which has been signed by more than 90% of the UK's food retailers as well as major businesses across the food value chain, has been extended to 2030, with a new ambition to halve absolute emissions. The update to the Commitment, posted today (20 July), sees 2025 targets on carbon,

food waste and water built upon with longer-term goals. WRAP said in a statement that the update is designed to align the sector with the UN's Sustainable Development Goals (SDGs) relating to these topics and takes account of “the newer demands of climate action”... On food waste, the 2025 commitment is to reduce food and drink waste in the UK, post farm gate and on a per-person basis, by 20%. It has a 2015 baseline. The new 2030 commitment has a 2007 baseline and entails halving waste.

Saturday 28th August

Large swathes of apparel-producing areas in Asia will be underwater by 2030, an analysis released on Friday which overlaid maps of rising sea levels onto factory locations showed, threatening thousands of suppliers with submersion unless they relocate to higher ground. The analysis, produced by two Cornell researchers as part of a

finance for developing countries and delivered \$83bn in climate finance during its previous five-year action plan, including more than \$21bn in 2020.

<https://www.edie.net/news/6/World-Bank-increases-climate-finance-for-developing-nations/>

Wednesday 4th August

In a new report from the National Audit Office (NAO), published [in July], it is revealed that 91% of the UK's local authorities have set at least one climate commitment, with more than one-third (38%) committing to reach net-zero for their operations or local area by 2030. But their ability to deliver against these goals could be hampered by a lack of clarity and support from Whitehall departments. On the clarity side of things, the report states that most local authorities would support the introduction of mandates for net-zero targets from councils... In terms of funding, the NAO report welcomes an increase in grant funding for local authorities' decarbonisation initiatives from £74m in 2019-2020 to £1.2bn in

2020-2021. But it warns that funding “remains fragmented”, leaving many councils unsure of how best to access support and risking a piecemeal response.

<https://www.edie.net/news/11/-Serious-weaknesses-in-UK-Government-s-plans-for-engaging-local-councils-on-net-zero--report-warns/>

Thursday 5th August

India's Mukesh Ambani, Asia's richest man and a fossil-fuel billionaire, announced he will be investing 750 billion rupees (\$10.1 billion) over three years in clean energy. Ambani is chairman, managing director, and the largest shareholder of Reliance Industries, a Fortune Global 500 company and India's most valuable company by market value. Reliance is a diverse company that gets 60% of its revenue from oil refining and petrochemicals. Ambani announced that Reliance will spend 600 billion rupees on four gigafactories to produce solar modules, hydrogen, fuel cells, and a battery grid. An additional 150 billion rupees will be

invested in value chain and other partnerships. Ambani said: “*The age of fossil fuels, which powered economic growth globally for nearly three centuries, cannot continue much longer. The huge quantities of carbon it has emitted into the environment have endangered life on Earth.*”

<https://electrek.co/2021/06/28/egeb-indian-fossil-fuel-billionaire-to-invest-10-1b-in-clean-energy/>

Friday 6th August

The Environmental Protection Agency (EPA) [in Ireland] has today published the *Water Quality in 2020: An Indicators Report* which provides an assessment of the quality of Ireland’s rivers, lakes, estuaries and groundwaters. It has found that:

- Ireland’s surface waters and groundwaters continue to be under pressure from human activities.
- Just over half of Ireland’s rivers and lakes are in a satisfactory condition which means that a large number are unable to sustain healthy ecosystems for fish, insects and plants.

- Nitrogen levels in rivers, groundwater, and estuaries in the south, southeast and east of Ireland are too high and increasing. This is primarily due to agricultural activities.
- Urgent and targeted action is required to reduce the amount of nitrogen entering our waters.

<https://www.epa.ie/news-releases/news-releases-2021/urgent-action-needed-to-curb-nitrogen-pollution-in-irelands-waters-says-epa.php>

Saturday 7th August

Richard Branson, founder of Virgin Galactic, successfully flew to space and landed back on Earth [last] month, a move that has reignited the conversation about rocket pollution. Over the years, pollution caused by rocket launches has often been brushed away due to the few launches taking place. However, due to the recent billionaire space race, conservationists are raising concerns over the pollution these launches create...With advancing rocket technology, the cost of touring space is decreasing and

carbon tax. But, given that greener forms of energy exist in tandem with fossil fuel systems across the continent, this approach might harm rather than help efforts to fight climate change...For developing countries to advance their citizens’ social and economic growth, one thing is essential: reliable electricity. These countries therefore face a dual challenge of driving the energy transition from high- to low-carbon energy and increasing electrification rates.

<https://theconversation.com/bannin-g-fossil-fuels-in-sub-saharan-africa-could-slow-the-transition-to-renewable-energy-162891>

Wednesday 25th August

Tonight’s Green Christian workshop is the next in the series on our rules of life - *Exploring the Way of Life: Public Witness* with George Dow. The Green Christian Way of Life offers a framework for living more lightly on the earth and for deeper engagement and shared encouragement. It comprises a set of four disciplines, one of which, The discipline of Public Witness, entails committing to action for

creation care, e.g. through active involvement in local or national projects or campaigns; giving out Green Christian leaflets; speaking out, whether to friends, at church, or in other public forums; writing or speaking to MPs or organisations. All these and more are ways of Public Witness, particularly when there is some resistance. George Dow is Green Christian Co-Chair and the Way of Life Co-ordinator. <https://us02web.zoom.us/join/91252000000?pwd=Z0pjb09HdXwhbn7aXhgP4SOJx-OmwwqY>

Thursday 26th August

A new study [from Oregon State University] has found that shade provided by solar panels increased the abundance of flowers under the panels and delayed the timing of their bloom, both findings that could aid the agricultural community. The study, believed to be the first that looked at the impact of solar panels on flowering plants and insects, has important implications for solar developers who manage the land under solar panels, as well as agriculture and pollinator health

back to a right relationship with God.

As we seek to serve and follow you, we find not only broken people, but a broken world, despoiled at first in ignorance, but now in greed and wilful, headstrong, selfishness.

We come to beg your pardon for our parts in this tragedy, for rejecting your loving care in the 'perfect planet' you gave us, and to claim the forgiveness you offer for our parts of the shameful actions that have led us to this point.

But we are aware that accepting forgiveness marks a need to change our ways, to be more fully your people, less greedy, less selfish, more loving.

Monday 23rd August

Last year, the Swiss government put forward a proposal to list a widely-used plastic additive in the Stockholm Convention, the UN's global treaty on persistent organic pollutants...A new investigation by *Unearthed* [Greenpeace UK's

investigative platform] reveals that powerful lobby groups representing corporations such as BASF, ExxonMobil, Dow Chemical, DuPont, Ineos, BP and Shell, are opposing the proposal arguing that there is insufficient evidence to consider the additive a persistent organic pollutant. Emails and documents obtained under transparency laws from the US Environmental Protection Agency show the American Chemistry Council and the European Chemical Industry Council raising concerns about the precedent the proposal could set.

<https://www.greenpeace.org/international/press-release/48549/oil-and-chemical-giants-lobbying-against-rules-on-microplastic-chemicals-investigation-reveals/>

Tuesday 24th August

[S]ub-Saharan Africa's energy systems, ... are currently patchy and often unreliable. Many countries' reliance on fossil fuels has led policymakers to suggest that fossil fuel systems should either be banned or indirectly discouraged through imposing a

consequently attracting more tourists. Conservationists worry that the trend poses a threat to the environment, given the enormous amount of pollution rockets emit. According to Eloise Marais, an associate professor of physical geography at University College London, one long-haul flight produces a maximum of 3 tons of carbon dioxide per passenger, while one rocket produces up to 300 tons for a trip of about four people. A report from Futurism also points out that the kerosene and methane rockets burn "can end up harming the ozone layer."

Sunday 8th August

Show the Love

God, whose heart is the centre of the Universe

whose being is interfused with the world,

You look on all people with love

Your name is Agape

You look on the child with the empty bowl

and ask us why we do not share

You look at the lonely old man and ask why we are unfriendly, You see the plastic in the ocean and ask why we take so much.

Taken from Penny McCulloch's prayer

<https://greenchristian.org.uk/resources/show-the-love-prayer-2021/>

Monday 9th August

Just 2% of the Covid-19 stimulus funding promised by nations has been spent on clean energy, meaning that global emissions are likely to hit a record high in 2023 and continue rising thereafter. That is the key finding of the International Energy Agency's (IEA) Sustainable Recovery Tracker. Published [in July], the Tracker analyses more than 800 policy decisions taken across more than 50 countries in relation to delivering the economic recovery from Covid-19...According to the IEA, unless green recovery plans are scaled up and high-carbon investments pared back, global emissions are likely to climb to record levels by 2023 and continue to rise in the years thereafter. The emissions increase

will be 800 million tonnes lower than if no green recovery efforts were enacted, but, nonetheless, the world will remain off-track to deliver the Paris Agreement or net-zero by 2050.

[https://www.edie.net/news/11/IEA--Global-emissions-to-reach-record-high-by-2023--with-governments-breaking-green-recovery-promises-/-/](https://www.edie.net/news/11/IEA--Global-emissions-to-reach-record-high-by-2023--with-governments-breaking-green-recovery-promises-/)

Tuesday 10th August

In the archive of the UK Centre for Ecology & Hydrology there is a typed note from the 1960s that planted the seed of an idea. The note reads: “*It might be interesting to watch what happens to this area if man does not interfere. Will it become a wood again, how long will it take, which species will be in it?*” So began the Monks Wood Wilderness experiment, which is now 60 years old. A rewilding study before the term existed, it shows how allowing land to naturally regenerate can expand native woodland and help tackle climate change and biodiversity loss...The result is a structurally complex woodland with multiple layers of

tree and shrub vegetation, and accumulating deadwood as the habitat ages.

<https://theconversation.com/monks-wood-wilderness-60-years-ago-scientists-let-a-farm-field-rewild-heres-what-happened-163406>

Wednesday 11th August

Tonight’s Green Christian online workshop is *Labyrinths: spirituality, place and the environment* with Annabel Barber. Annabel Barber passionately believes that labyrinth spirituality has a role to play in repairing damaged connections between people and their environment, and enabling us to change how we live. Labyrinths are a spiritual tool used in many religions since prehistory, with a particular flowering in Christianity during the age of building the great Cathedrals of Europe. There has been a recent resurgence of interest in labyrinths as an accessible and valuable spiritual tool for everyone. The workshop will give some basic introductory information about labyrinths, outline what labyrinth spirituality is, explore its practice, and provide resources,

loss rates since monitoring began, totalling a 75% drop year-over-year.

<https://www.goodnewsnetwork.org/indonesia-cuts-deforestation-rates-by-75-year-over-year/>

Friday 20th August

Climate breakdown will stress essential food crops. Scientists and farmers in India are working together to find a solution for chickpeas...Professor Rajeev Varshney, the research program director for Accelerated Crop Improvement Program at International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) [says] “*In the changing climate, legume crops like chickpea have immense potential to help the marginalised.*” The team at ICRISAT became the first in the world to explore the crop to find climate resilient varieties - and have found those with 10 percent higher productivity. Moreover, the varieties were developed in half the expected time, speeding up the research using advanced technology.

<https://theecologist.org/2021/jul/23/search-climate-resilient-crops>

Saturday 21st August

To meet an ambitious goal of carbon neutrality by 2045, California's policymakers are relying in part on forests and shrublands to remove CO₂ from the atmosphere, but researchers at the University of California, Irvine warn that future climate change may limit the ecosystem's ability to perform this service. In a paper published [in July] in the American Geophysical Union journal *AGU Advances*, the UCI Earth system scientists stressed that rising temperatures and uncertain precipitation will cause a decrease in California's natural carbon storage capacity of as much as 16 percent under an extreme climate projection and of nearly 9 percent under a more moderate scenario.

https://www.eurekalert.org/pub_releases/2021-07/uoc--ccm072221.php

Sunday 22nd August

Dear Jesus, you came among us, generations ago, to show God’s love for people in all their brokenness, and so to lead them

moderate, and they declined when temperatures were above normal. <https://insideclimatenews.org/news/24072021/warming-trends-increasing-heat-is-dangerous-for-pilgrims-climate-warnings-painted-on-seaweed-and-many-plots-a-global-forest-make/>

Saturday 14th August

...Petorca, 200 kilometres north of the Chilean capital Santiago, is facing a water crisis due to the explosive growth of large-scale avocado farming. This water-intensive production has dried up local rivers and forced many smallholder farmers to leave the area....Meanwhile, the provincial government has to buy and deliver water to more than 6,000 people in rural communities, 20% of the province's population, by truck. The quality of this water is not guaranteed...The root of this distribution problem lies in Chile's Constitution and Water Code, both written in 1981 under a military dictatorship... Communities are hopeful that a new constitution will dismantle water privatisation in Chile and ensure fair distribution.

<https://www.climatechangenews.com/2021/07/16/chileans-look-new-constitution-return-water-communities/>

Sunday 15th August

God, whose heart is the centre of the Universe
whose being is interfused with the world
Inspire us to look on all people with love
and to flourish immersed in Agape
Forgive us when we take too much because we can pay for it
but do not count the true cost.
Forgive us when we overlook the forgotten
because we don't know them
but do not count their true worth.
Forgive us, so that we can begin anew
to look on all people with love
and flourish, immersed with Agape

Taken from Penny McCulloch's prayer
<https://greenchristian.org.uk/resources/show-the-love-prayer-2021/>

Monday 16th August

A new report by WWF and the UN Environment Programme (UNEP) warns that human-wildlife conflict is the main threat to the long-term survival of some of the world's most emblematic species. The report, *A future for all - the need for human-wildlife coexistence*, highlights that globally, conflict-related killing affects more than 75% of the world's wild cat species, as well as many other terrestrial and marine carnivore species such as polar bears and Mediterranean monk seals, and large herbivores such as elephants... The report states that while it's not possible to completely eradicate human-wildlife conflict, there are approaches that involve the full participation of local communities that can help reduce it and lead to coexistence between humans and wildlife. One success story is the Kavango Zambezi Transfrontier Conservation Area in Southern Africa where communities reported that most of their livestock losses through predation by lions occurred where free-ranging, unprotected cattle roamed in the evenings and at night. The installation of fixed and mobile lion-

proof corrals for night-time protection in risk-prone areas led to a 95% reduction in livestock killings in 2016, and there were zero retaliatory killings of lions in 2016 (compared to 17 killed in 2012 and 2013), allowing previously threatened lion populations to recover.
<https://updates.panda.org/human-wildlife-conflict-report>

Tuesday 17th August

Pop-up shop the InConvenience Store will take 'shoppers' on a journey to a future without nature, showing the grim reality of what life in Wales could look like, if we fail to tackle the nature and climate crisis... Its products - like sandbags, clean air and drinking water - paint a grim picture of everyday essentials we'd need to survive if nature's no longer helping us combat problems like pollution and flooding. A new RSPB report also launched [in early July] shows how governments could change the course of history and even unlock billions of pounds a year in public benefits. The report shows how nature is crucial to our efforts to
